

Vector Productivity

Thrusts Ahead With New Boom and CB Nozzle

Anyone who cleans catch basins every day knows it's a labor-intensive job. The setup and teardown procedure might take 15-30 minutes per site.

Now, Vector® offers two new solutions that cut the time and hassle of catch-basin cleaning: a new extendable boom and a new Catch Basin nozzle. The new, optional boom telescopes outward five feet along with an additional five feet of vertical movement, for a dramatic increase in boom coverage.

Because there's no need to tear down and set up pipes between every catch basin, the new Vector 5x5 boom combined with the CB nozzle makes the total unit much more productive.

The new boom's productivity improvements include:

- + A significant increase in the number of catch basins that can be cleaned in a day
- + Improved efficiency, whether a municipal crew or a contractor is doing the job

The new CB nozzle adds five feet of length to reach down into catch basins or sewer holes with ease.

The new Vector 5x5 boom telescopes outward five feet and allows the hose to move downward an additional five feet. Movement is controlled by a convenient wireless remote (optional).

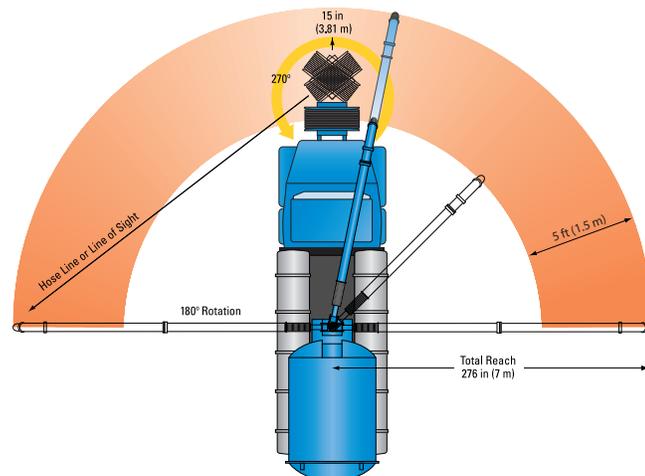

Telescoping Catch Basin Nozzle

The new Catch Basin nozzle is designed to fit a standard 8-inch vacuum system and consists of an aluminum pipe nestled inside a flexible section of hose. This extendable nozzle is attached by a simple clamp. The nozzle provides seven feet of reach in the fully collapsed position and can extend an additional five feet for a total of 12 feet.

The CB nozzle is designed to fit any standard 8-inch vacuum system. The nozzle also has applications on

sweepers and other vacuum equipment used to clean out catch basins.

The Vector 2100 Series has a long reputation for being the most productive sewer cleaner on the market. The new boom and CB nozzle continue the Vector tradition of handling any application with speed, thoroughness and agility. For more information, see your local Vector dealer, call 1-800-627-3171, or visit www.vector.com.

The synergy of the unique Vector telescoping, rotating hose reel and telescoping boom creates the most efficient work system in the industry.
