Vactor® Vactor Vision Camera System

Vactor® Vision Camera System

Part #48957 Quad-System Camera

A Multi-Camera System for Safer Operation of Any Vactor Truck

The Vactor Vision camera system is designed to help all drivers operate any Vactor truck with optimum safety to surrounding pedestrians, traffic and property. It also helps truck personnel to work and operate more safely in dangerous conditions, such as high traffic areas.

The Vactor vehicle safety camera system provides clear camera views on a high-resolution, color LCD monitor. Camera inputs support up to four exterior cameras. All four images can be viewed on the monitor at the same time, viewed in any combination, or scanned one at a time in full screen mode.

Specific cameras can be triggered to activate with turn signals or reverse gear shifting. Additional features include soft touch backlit controls, on-screen display with user interface, integrated audio speaker, NTSC video output (RCA jack) and IR repeater for external navigation control.

Vactor's standard color camera features LED-enhanced low-light performance, a

built-in microphone, and an "image orientation" selector switch. These rugged cameras also feature waterproof cable connectors and come with non-corrosive, stainless steel mounting hardware.

Special side-body cameras help eliminate blind spots on both sides of the vehicle to provide greater safety and confidence for even the less experienced driver. These aerodynamic cameras feature impact resistant housing, and come complete with all hardware to mount easily to any flat surface.

Built and tested specifically for rugged outdoor use.

- Vision on all sides of truck
- No more "hidden" obstacles
- Helps protect workers
- Helps prevent vehicle damage
- Clear, high-definition LCD monitor
- Simultaneous camera viewing on one screen
- Rugged and dependable

Effective 11/06
